DRIVESAFE™
for the ones
you love.

What is the DRIVESAFE personal breath tester?

DRIVESAFE personal breath testers will give a precise reading of your breath alcohol concentration. Use it to verify if you are below the legal limit before driving a vehicle, or before operating a boat.

How accurate is it?

The sensor used in the DRIVESAFE tester is the same as those used in law-enforcement portable breath testers. Less expensive testers use semi-conductor sensors that require constant calibration to remain accurate. The DRIVESAFE long term stability sensor provides accurate results over years of use, and requires calibration only once a year.

How does it work?

It's as easy as breathing:

1. Insert mouthpiece.
2. Press START button.
3. Blow for 5 seconds.
4. Read Display.

DRIVESAFE testers use a hygienic mouthpiece to direct the breath sample into the unit. The sample is analyzed using an advance electrochemical fuel cell sensor. Results are given in large digits on the display, along with a "pass," "warn" or "fail" colour indication.

DRIVESAFE

Breath Alcohol Tester

Specifications

Size: 137 mm x 59 mm x 26 mm

Weight: 155 grams

Sensor: Electrochemical

Temperature range: 0 to 50 °C

Initial test: < 10 seconds

Analysis time: < 10 seconds

Display: 3 digit LCD with graph and tri-colour backlight

Battery: 2 AA batteries

Battery life: 1000 tests

Mouthpiece: Disposable (95-000250)

Calibration: Annually

Is there a warranty?

ACS breath alcohol testers are warranted to be free from defects in workmanship and material for one year from the date of purchase. Only qualified technicians should perform the maintenance of any breath alcohol tester.
